

HELLO, ABYSS
02
THE ABODE OF
TREES AND
FOSSILS

A CRIMSON SPLIT-JAW!

H-
HELLO
THERE
...?

A
KID
...?

H-
HUH?

WHERE
DID HE
COME
FROM
...?

HAMMERBEAK

THESE BIRDS LIVE IN A WIDE AREA RANGING FROM THE SURFACE ALL THE WAY DOWN TO THE FOURTH LAYER OF THE ABYSS.
THE DEFINING FEATURE OF THIS SPECIES IS THE WAY ITS BEAK IS FUSED DIRECTLY TO ITS HARD SKULL.
THE WINGSPAN OF AN ADULT CAN EXCEED THREE METERS.

MALES BASH THEIR SKULLS AGAINST EACH OTHER IN DISPUTES.
SPARKS LITERALLY FLY WHEN THEIR HEADS COLLIDE.

THEIR MEAT IS DELICIOUS AND IS TREASURED AMONG CAVE RAIDERS AS A USEFUL FOOD SOURCE.
THE SKULL OF ONE CAN BE USED AS A FLINT FOR STARTING FIRES, COOKWARE, OR EVEN AS A CONTAINER.
A SINGLE BIRD CAN PROVIDE BOTH A MEAL AND THE TOOLS NEEDED TO COOK IT.

THE FEATHERS MAKE
FOR HIGH-QUALITY
KINDLING.

DANGER LEVEL: ★ (INSIGNIFICANT)
